DETAILED ACTION

Election/Restrictions

1. Restriction is required under 35 U.S.C. 121 and 372:

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

I. Claims 1-14, 17-18, and 48, drawn to connecting nodes in a communication network having circuit-switched and packet-switched services, this subject matter deals with input and output (I/O) switching, a plurality of resources, and a controller establishing logically distinct links through a node.

II. Claims 19-41, and 50, drawn to minimizing the switching delay which is achieved by a communication node consisting of input and output ports, signal processing I/O ports, and using switches where one used for bypass one or more signal processing and the other switch for configuring to direct signals, this subject matter deals with managing resources of communication nodes connected to the network.

III. Claims 42-47, and 49, drawn to multiplexing different types of signals on a communication link, this subject matter deals with communication nodes consisting of I/O ports, and a control means programmable to aggregate signal components in an aggregated logical link having a bandwidth.

Art Unit: 2142

2. The inventions listed as Groups I-III do not relate to a single general inventive concept under PCT Rule 13.1 because, under PCT Rule 13.2, they lack the same or corresponding special technical features for the following reasons: Group I is directed towards a communication node for establishing a plurality of logically distinct communications links running through the node, whereas Group II is directed towards in having switches where one configures signals to bypass the signal processing to a different route and the other switch directs the signals, and Group III is directed towards aggregating signal components in an aggregated logical link having a bandwidth.
